

**AVALON DEVELOPMENT CORP.**

**PROSPECT 2012-3**

**Commodities:** Copper, molybdenum, gold and silver

**Access:** Limited paved and gravel roads, mostly by air

**Infrastructure:** Close to regional infrastructure

**History:** Unpublished but moderate placer gold production, extensive copper-molybdenum exploration in the 1960-1980 time frame, limited lode gold exploration in the late 1990s.

**Resources:** No lode gold or copper resources in district

**Geology:** Poly-metamorphosed pelitic schist with Jurassic and Cretaceous intrusives, regional high angle and low-angle structures important.

**Mineralization:** Copper-molybdenum mineralization potential in 55-70 Ma intrusive complexes as well as intrusive-related gold mineralization that is genetically, temporally and chemically identical to several +1 Moz. intrusive related gold deposits in the Tintina Gold Belt

**Recent Exploration:** No significant exploration in the last decade.

**Land and Competitors:** Open State lands and lesser Alaska Native corporation lands.
